chapter 3 communities biomes and ecosystems chapter test practice your results the correct answer for each question is indicated by a 1 a biotic or abiotic the largest biome water covers nearly 75 percent of the earth 39 s surface in the form of oceans lakes rivers etc just like all other biomes the aquatic biome can be divided into two categories freshwater regions and saltwater regions climate the average weather in an area over a long period of time biomes are large areas of the earth with defined climates and plant life students connect different biomes to climate plant life and animal life matching worksheet 1 worksheet 2 research worksheet 3

1 biomes may be terrestrial aquatic or atmospheric 2 temperature gets cooler as you move away from the equator 3 terrestrial biomes include all the land and water areas on earth where organisms live 4 sunlight penetrates roughly 200 meters into the water 5 a biome is a specific subtype of an ecosystem where organisms interact with each other and their environment biomes are categorized as either terrestrial or land based or aquatic or water based some biomes include rainforests tundra deserts taiga wetlands rivers and oceans there are five major types of biomes aquatic grassland forest desert and tundra though some of these biomes can be further divided into more specific categories such as freshwater marine savanna tropical rain forest temperate rain forest and taiga aquatic biomes include both freshwater and marine biomes match each abiotic or biotic component with its correct ecosystem cold water lots of oxygen intermediate sunlight lake abiotic components freshwater jellyfish steelhead trout bladderwort lake biotic components jaguar anaconda orchid plants amazon rainforest biotic components heavy rainfall nutrient dense soil warm air amazon ecology chapter 3 lesson 3 biomes and aquatic ecosystems what do ecologists typically classify the homes of organisms into click the card to flip roughly ten different regional communities called biomes click the card to flip 1 19 flashcards learn test match q chat created by ketchupd terms in this set 19 study with quizlet and memorize flashcards containing terms like biome characterized by deciduous and evergreen trees a dry season and animals such as monkeys elephants and tiger average precipitation range 200 cm per year area with low rainfall 2 26 cm per year whose annual rate of evaporation exceeds its annual rate of precipitation what is a biome it is a complex of terrestrial communities that covers a large area and is characterized by certain soil and climate conditions and particular assemblages of plants and animals biomes and climate page 98 2 what does a climate diagram summarize it summarizes a region s climate including temperature and precipitation 3 a biome is a specific geographic area notable for the species living there a biome can be made up of many ecosystems for example an aquatic biome can contain ecosystems such as coral reefs and kelp forests not all scientists classify biomes in the same way some use broad classifications and count as few as

six biomes think about it sample answer the subtropical desert and arctic tundra while different in many ways share some significant similarities both biomes experience very low annual precipitation and can experience significantly cold temperatures at night though the latter is more prevalent in the arctic tundra study with quizlet and memorize flashcards containing terms like name the 3 main biomes of the united states land only what 2 biomes are closest to where you live place an x on the map to show your approximate location what u s state could a person visit a tropical rain forest in and more biomes grade 3 science worksheet match each biome to its description a biome is a large area of the earth where certain plants and animals live biomes are determined largely by the area 39 s climate choose one biome and describe its climate draw a picture showing some of the living things in the biome very little rain falls so plants 1 temperature 2 precipitation in a given location during each month of the year a microclimate small areas within a biome that can have varied climate tropical rain forest biome that occurs on or near the equator tundra occurs near or above 60 degrees n latitude boreal forest standards ucp 1 ucp 3 ucp 4 a 1 a 2 c 4 c 5 d 3 f 5 g 3 2 sessions 1 block biomes national science education standards ucp 1 3 a 1 a 2 c 4 c 5 c 6 f 3 5 g 1 g 3 3 sessions 11 2 blocks 1 explain how limiting factors and ranges of tolerance affect distribution of organisms 2 sequence the stages of ecological succession 3 the major biomes pages 99 104 6 circle the letter of each sentence that is true about how each of the world s major biomes is defined a each is defined by a unique set of abiotic factors b each has a characteristic ecological community c each is defined by the country it is in d each is particularly defined by climate 7 a habitat is simply the region in which organisms live and includes all the living factors in that place in other words it contains all the biotic factors present ecosystems on the other hand include both the biotic factors like animals abiotic factors like temperature and water and the interactions between them 15 votes
